

# Management made easier

EMA COMPUTER SOLUTIONS has released version 6 of its Bodyshop Manager and Business Manager PC-based tools. Both tools simplify the control and management aspects of bodyshops and facilitate optimum loading by maximising available resources (productives, materials and courtesy cars) and automating administrative tasks.

Bodyshop Manager features 30 Status Panels, which display all key information including

jobs awaiting invoice, jobs due out today and parts still to order.

The latest version also allows for the exporting of data (such as customer and vehicle details) to Audatex and Glassmatics' estimating tools.

'Bodyshop Manager version 6 is all about eliminating what in lean terms is known as 'waste' – and having to re-key data which is already on another site into another tool is very wasteful,' said EMACS Director Alan Hargreaves.
